

Prolam Photo 6 Roller Photo Pouch Laminator

With its exclusive 6 Roller Thermal System (4 heated rollers + 2 Cold rollers), the Prolam Photo laminator is a professional solution for photo lamination as well as hot foiling and mounting.

Features include: **Balanced heat dissipation** is ideal for hard-to-laminate materials • **Variable Speed & Temperature Control** combination delivers fast lamination of all standard pouch thicknesses (from 3 mils to 10 mils) with the press of a button (no waiting period when changing thickness) • **Exclusive "Flex-Tite" System** allows rollers to adjust to different material thicknesses • **8-bit Micro-Processor Control System** precisely sets the exact temperature & speed for a fast, consistent and user-friendly laminating experience • **Energy Saving Stand-by Mode** conserves energy • **Overheat Protection System** automatically cuts heat if temperature exceeds 160°C (320°F) • **Auto Memory Function** stores last speed & temperature settings before turning off • Silicon Rollers allow laminating with or without a carrier. All Metal Construction.

Prolam Photo 6 ROLLER PHOTO POUCH LAMINATOR

Prolam Plus 330

Prolam Plus 330 Dual Heat System Laminator
This Dual Heat System (heated rollers and heat plate) offers more efficient lamination at lower temperatures for all standard pouch thicknesses (from 3 mils up to 10 mils). The heated-rollers allow a balanced heat distribution during laminating process, thus guaranteeing a crystal clear, bubble-free laminating result even with photos & ink-jet printouts.

DUAL HEAT SYSTEM LAMINATOR

Features include: **Electronic Circuit (PCB) & Gradual Temperature Control** for easy fine-tuning of temperature during frequent changing of pouch thickness, pouch composition or materials • **Metal Cover** prolongs working life and more professional, heavy duty look • **Silicon Rollers** allow laminating with or without a carrier • **Metal Gears** guarantee strength and durability • **Forward / Reverse Switch** corrects jams fast when document is improperly fed or temperature is set too high • 3" Throat Extra-wide in-feed for easy pouch feeding • Ready Light / Power Light / Power Switch • Heat / Cold Switch

Prolam 100 / Prolam 230 / Prolam 320 Laminators

Easy and practical Prolam models laminates with or without a carrier (we recommend the employment of carriers only when using 10mil (4/6) pouches). With a heavy-duty motor, steel gears, silicone rollers, metal cover, etc., the Pro-Lam is made to last.

Features include: **Extruded Aluminum Heat Plates** guarantee a consistent heat distribution • **Four Silicon Rollers** eliminate the need to use carriers while ensuring a constant feeding speed • **Built-in Electronic Circuit Board** allows quick and exact temperature adjustments • **Gradual Temperature Control** for easy temperature adjustment when changing pouch thickness or composition, or changing materials • **Independent Heat and Motor Switch** allows extended stand-by (heat ready) mode, cutting motor wear and eliminating the warm-up time • Heavy-Duty Motor and Steel Gears.
