

The CBS 340 machine is made in Germany, and is engineered of quality heavy gauge metals.

CBS 340

Modular Finishing Machine for Plastic Spiral
SEMI-PROFESSIONAL LINE

Electric coil inserting machine that can be used as a standalone unit or attached to the DTP 340 M.

The **CBS 340** is an electric inserting machine for plastic spiral up to 20mm. The unit cuts and crimps plastic spiral up to 20 mm. The **CBS 340** is designed to work independently as a standalone unit or as a module that can be attached to the **DTP 340 M**. With a simple attachment system, integral on the **DTP 340 M**, the units can be combined in a few seconds producing an extremely compact punching and binding system.

Quick Setup Automatic Plastic Spiral Inserter and Finishing Machine

PROFESSIONAL LINE

Automatically inserts pre-cut lengths of spiral and simultaneously crimps both ends in a single operation.

The **APSI 300 Automatic Plastic Spiral Inserter** binds up to 600 books per hour and accommodates pre-cut plastic spiral diameters from 6mm to 20mm. Diameters up to 30mm are available with the optional changeover kit. A built-in spiral sizing gauge helps the operator confirm the exact diameter required in relation to the book's thickness. Vertical book placement allows for tabs or deeper covers to line up easily and bind accurately. In addition, a set of 15 spine formers are what the pre-punched books sit on and correspond to the diameter of spiral being used. Spiral diameter setup and changeover is quick and accurate with the QSA (quick-size adjustment) lever and does not require tools. The **APSI 300** measures 36" x 24" x 42" and is mounted on wheels for easy relocation.
